

Boot space planner

1. Record your actual space and the items you want to store.

Measure first. This worksheet records questions and dimensions; it does not verify fit, carrying capacity or load restraint. Use your vehicle manual for carrying and securing items.

Park safely before measuring. Use millimetres (mm) throughout. Record the seat and floor setup, then measure the usable area and the narrowest opening along the intended path. Leave unknowns marked "check".

Vehicle / seat and floor setup (no registration or VIN needed)

Usable area: width _____ mm depth _____ mm height _____ mm

Narrowest opening / path: width _____ mm height _____ mm

Sketch the footprint, opening and obstructions.

Mark where/how you measured. Note wheel arches, hinges and access you need.

Items to store

Item	Qty	Longest x widest x tallest (mm)	Access needed

Next: compare external size, internal usable space and missing facts on page 2.

Boot space planner

2. Compare candidates. Keep unknowns visible.

Measure first. This worksheet records questions and dimensions; it does not verify fit, carrying capacity or load restraint. Use your vehicle manual for carrying and securing items.

Use the exact model and variant. Outer dimensions describe the organiser; internal usable dimensions describe what it may hold. A size comparison alone cannot confirm that it will pass the opening, close with the hatch or suit the vehicle.

Record from the seller / maker	Candidate A	Candidate B
Exact model / variant and source		
Outer width x depth x height (mm)		
Internal usable / pocket sizes (mm)		
Rigid or flexible? Lid / handle space?		
Date checked / unanswered questions		

Fictional example - why smaller is not a fit verdict

Space: 700 W x 500 D x 400 H mm. Opening: 600 W x 350 H mm. Candidate outer size: 650 W x 400 D x 300 H mm. It is smaller than the space in each recorded dimension, but its stated width exceeds the opening width by 50 mm.

Conclusion: the path, orientation, obstructions and hatch closure still need physical checking. These invented numbers neither approve nor rule out a fit. No product or vehicle has been tested.

Before deciding

- ☐ Check missing dimensions, opening/path and lid or handle clearance.
- ☐ Check access, floor/seat setup and vehicle-manual carrying/securing guidance.
- ☐ Ask the seller for evidence where information is missing; do not guess.

My next question / check (a planning note, not a fit approval)

Free print-and-write sheet. No entries are collected by this PDF. Bay & Boot's range is in development; this is not a purchase offer or a tested-product recommendation.
